RSA°Conference2017

San Francisco | February 13-17 | Moscone Center

SESSION ID: CSV-W02

Open Security Controller - Security Orchestration for OpenStack

Tarun Viswanathan

Platform Solution Architect Intel

Manish Dave Platform Architect

Notices and Disclaimers

- Intel technologies' features and benefits depend on system configuration and may require enabled hardware, software or service activation. Learn more at intel.com, or from the OEM or retailer.
- No computer system can be absolutely secure.
- Tests document performance of components on a particular test, in specific systems. Differences in hardware, software, or configuration will affect actual performance. Consult other sources of information to evaluate performance as you consider your purchase. For more complete information about performance and benchmark results, visit <u>http://www.intel.com/performance</u>.

SDI—The Application Defines the System

The evolution to software-defined infrastructure

One application per system

Static perimeter-focused security hardware appliances

TRADITIONAL HARDWARE

One application per virtual system

Partially automated security physical/virtual appliances

ABSTRACTING THE HARDWARE

Applications **define** the system

Fully automated software-defined security

ABSTRACTING THE DATA CENTER

Enterprise Multi Cloud Security Challenges

Open Security Controller Key Design Goals

Centralized security policy management for a multi cloud environment.

No Lock-in Vendor agnostic open solution

Automated provisioning, distribution, and delivery of security inside data center perimeter

Policies aligned with specific application workloads

Dynamic scale-out Security VNFs

Separation of duties to enable use of familiar tools

Conceptual Architecture

Orchestrating security policies with network provisioning across multiple virtual environments

OpenStack* Micro-Segmentation Use Case

• Advanced threat protection for East-West traffic flows

OSC API Interaction Model

Customer PoC: Health industry IT services provider

- Customer has to adhere to HIPAA regulatory requirements
- Existing solution was based on DC edge devices.
- Customer wanted to get to a dynamic policy based security solution for East-West traffic inspection.

Customer Deployment Architecture

Customer PoC: Large financial services provider

- Customer has to adhere to PCI regulatory requirements
- Customer wanted to get to a Risk Based automated security policy management capability for their Openstack environment

Customer deployment Workflow

RS∧°Conference2017

DEMO

Automated Security Services Orchestration for Openstack

Apply: Risk Based Approach

- 1. Identify workload which needs micro segmentation
- 2. Identify security controls to mitigate risks (vIPS, vNGFW, vADC)
- 3. Automate Security Controls orchestration

Call to Action

Current Status

- POC with early adopter customers / Security VNF's
- Open Security Controller available as Opensource ~ Mid 2017 compatible with few Security VNF and SDN vendors

Call to Action

- Contact us to get engaged in the community: Email: <u>manish.dave@intel.com</u> or <u>Tarun@intel.com</u>
- Additional Information: <u>www.intel.com/osc</u>
